

Röwer & Rüb Riding Track Drag

Ideal for thin surface layers and sand ground

The riding track drag optimally meets the changed structure of today's riding arenas. It produces reliable leveling of the upper surface without endangering the sensitive substructure. Two angle section chisels break up the surface which is then distributed and compacted with the rounded blade.

The rake frame, with replaceable rake, is continuously adjustable in height. Additional sliding rails guarantee long durability. The device with wall lining scraper and roller wheel is available for tractors of 30 HP and upwards. Of course all basic fabrication is in galvanized steel.

Article number	Width	Weight	Blades / Rake teeth	Net price ex VAT
RBS 200 (for tractors from 30 hp)	2,00 m	210 kg	10 / 15	2.720,00 €
